quantities

Store Service

Store Service is our software solution for mobile store management both in the wholesale and retail area. This solution offers processes such as article information, a function to change prices, monitoring of goods, stock taking and more.

Small introduction risk

Adaptation of processes can certainly be easily conducted if needed.

International orientation

Our software solutions are multilingual. Thus, rollouts into new markets, such as the Arabic or East Asian market, can be conducted simple and fast. Furthermore, users can freely choose the language they want to use when working with the system.

Minimal costs of operation

This is achieved by simple care, easy service, and effortless extension of the system.

Additional characteristics:

- Inventory management to the minute, at all places and at all times
- Global and mobile access to all relevant data
- Support of automatic disposition systems
- Global and central controlled workflow-management via „to-do-lists“
- Central definition of roles and user groups
- Function for selecting and choosing via search fields, bar code scanning or finger touch
